1. Air supply of Above diagrams is Rated Pressure of Vacuum Generator
2. Before the Maximum Vacuum Degree of Vacuum Generator ,There is a special pressure point. will cause Unstable phenomena like Beep noise ,Pressure must be adjusted to jump out of this range
3. When select Pipeline and component ,Pipe diameter should be greater than nozzle diameter 3 times , if air supply or exhaust is insufficient ,It can't meet the vacuum characteristic.Will casue Unstable phenomena like Beep noise

55 is Numerical setting ,Set up separately for : SW1 (Out 1 indicator) ,SW2 (out 2 indicator) ,HYS (out1+out2 indicator) Speed (Without Indicator) ,Speed : F0 (2ms) ,F1 (25ms) ,F2 (250ms)

0A Is Zero Setting ,some customers adjust their machines can use zero setting function ,After entering the interface, the device displays the current difference value. Press one UP + DOWN ,Numbers can be zeroed ,And Long pressure more than 1S to save

PS : Except Numerical setting ,rest settings if no operation within 5s ,will quit setting system ,back to working mode And the currently set data is not stored
